

Tom F. Peters

Transitions in Engineering

Guillaume Henri Dufour
and the Early 19th Century Cable Suspension Bridges

With a Foreword by André Corboz

1987

Birkhäuser Verlag
Basel · Boston

Table of Contents

1 Some basic issues	
9 Technical and scientific thought	
9 From 'overlay' to 'system'	
11 Structural engineering and architecture	
12 The method of examination	
12 Some questions	
12 Introduction	
2 Prehistory	
13 The earliest suspension types	
13 Primitive types	
14 The first catenary walkways	
14 Construction in cane and bamboo	
16 From the bamboo cable to the wrought iron chain	
17 Thang-stong rGyal-po	
21 The iron he used	
21 Variant Chinese chain bridges and stiffened, horizontal decks	
22 Information spreads to the West	
24 Early Western development	
33 Wire cables	
3 Background	
39 Geneva and the transmission of engineering information to the French-speaking world 1789-1815	
41 French access to information in the immediate post-war period	
42 Evolution of method and thought in French engineering education	
50 Development of statistics	
52 Navier: the scientific and technological modes of thought	
54 Graphic statics	
54 Strength of materials	
57 The education of Guillaume Henri Dufour	
4 Genesis of the wire cable bridge	
66 The Seguin brothers	
68 The bridge at Annonay	
70 Planning the Saint Antoine Bridge in Geneva	
73 Marc Seguin's letter and the first project for the Geneva bridge	
75 The problem of the catenary and its role in engineering research	
76 Marc Seguin's statics	
78 Marc Seguin's knowledge of engineering method	
79 Dufour's proposal	
85 Examination of wire in preparation for erection	
87 Dufour's wire experiments	
91 Wire experiments by the Seguin brothers	
92 Availability of wire	
92 Relative neglect of Dufour's role in French publications	
93 Test model for the Saint Antoine Bridge	
94 Ignoring the problem of resonance	
97 The Saint Antoine Bridge	
102 Anchoring the cables	
102 The manufacture of the cables compared to the Seguin method	
105 The odd cable connection	
108 Suspenders and stays	
110 Imported iron?	
111 Loads	
5 The establishment of a structural type	
115 Bridges at Liancourt, Passy and elsewhere in the environs of Paris	
117 Test bridge at Vienna	
119 Books begin to appear on the subject	
119 Dufour's contribution to the further development	
119 The Drac bridge at Grenoble	
121 The safety factor	
122 Further weaknesses in the proposal	
123 Two bridges by the Seguins	
126 Dufour's second structure: the Pâquis Bridge	
132 A simpler method of cable manufacture	

- 133 Connecting the cables
134 Coupling the suspenders
135 Research on friction
136 Loading the Pâquis Bridge
136 The novel problem of expansion
137 More proposals than structures:
Dufour continues to design
137 Coulouvrenière Bridge over the Rhone
137 Valentin Bridge over the Po River at Turin
141 Ile aux Barques Bridge
141 Coulouvrenière Bridge near
Saint Jean's church
141 Bridge over the Arve River
142 Peney Bridge
- 6 French development and their influence up to the catastrophe of 1850**
- 145 Controversy between adherents of cable and of chain construction
147 Vicat and the building of the Marie Bridge at Argentat
147 Movable cable bearings and their problems
149 Vicat's wire tests and complaints about the quality of bar iron
150 Detail problems of cable manufacture
151 A first approach to cable spinning
151 Concrete curing and load limitation
152 The report of 1831 on the state of the Rhone bridges
152 Aerial cable spinning
153 Cement as protection against rust
155 The wire cable bridge comes of age: the Grand Pont Suspendu in Fribourg
156 Joseph Chaley
156 Building the world's largest span
161 Alternatives, aerial cable spinning and the endless cable system
- 164 French methods cross the Atlantic
166 Tensile structures in building construction
169 The collapse of the Basse-Chaine Bridge
- 7 A truncated development; the underspanned suspension**
- 174 La Caille Bridge
175 Underspanned proposal for Fribourg
178 Reasons for awarding the contract to Chaley
178 Navier's report
180 Micklewood Bridge
181 Bergues Bridge
183 Preliminary versions in timber
187 Connections
187 Arch bridges in cast-iron
192 Third proposal in cast-iron
193 Consultation with Navier and a proposal by Telford
196 The underspanned Bergues Bridge
197 The structure
199 Calculation and erection
199 Planning the building process in detail
202 Testing the structure
203 Why chains?
205 The Bel-Air Bridge at la Coulouvrenière
208 Proposal for an Aar Bridge at Aarau
208 Conclusion
- 8 Annotated bibliography and index**
- 212 Abbreviations
212 Books, major journals and articles
230 Manuscripts
234 Index
- 243 Acknowledgements
